As part of World Environment Day, the EBSB Club motivated its members and other students to plant saplings in their own houses. Many households have not enough land for planting a tree. Hence our members extended their planting grounds to their neighbourhood lands. Despite the lockdown situation all members participated in the activity by planting a tree either in their own home or in their neighbourhood. Caring for and maintaining a tree is as important as planting a new sapling. So our members were instructed to do a follow up on the saplings that they planted as part of the earlier April Cool Challenge. 37 out of 42 planted found to be in good condition.
