Preface

Water pollution is a serious problem in India as almost 70 per cent of its surface water resources and a growing percentage of its groundwater reserves are contaminated by biological, toxic, organic, and inorganic pollutants. In many cases, these sources have been rendered unsafe for human consumption as well as for other activities, such as irrigation and industrial needs. Th is shows that degraded water quality can contribute to water scarcity as it limits its availability for both human use and for the ecosystem.

To address this serious issue, Indian Institute of Information Technology, Nagpur (IIITN), organized a poster competition with the paired institute IIITDM Kurnool on the theme of "**Innovative ideas to reduce water pollution in the country**". Total 43 students from both the institute has participated in the competition. The event took place in online mode because of pandemic.

The poster may be sketched or may be prepared digitally. Students have submitted their poster through online mode.

Poster submitted by Mr. Tanishq Tiwari, students of Computer Science and Engineering, second year, IIITN

 Poster submitted by Mr. Balu Prakash, students of Computer Science and Engineering, second year, IIITDM Kurnool

Poster submitted by Mr. Sanil Sanjay Sattarkar, students of Electronics and Communication Engineering, second year,IIITN
