

### **Report on Rainwater Harvesting Measures at IIM Trichy**

IIM Trichy campus already having three big artificially created ponds for rain water harvesting purpose. Since the land having natural slope and the ponds are connected with road side drains and drains are connected with the terrace of each building by pipes to collect the rain water from the catchment area and the pond details as follows: -

Pond no.1 near Sports complex = 3.80 acres with 10' depth

Pond no.2. near Solar plant = 1.46 acres with 6' depth

Pond no.3 near Library = 1.39 acres with 3' depth.

Pond 1 and 2 are inter connected to balance the water storage

Rain water being collected and stored every year. This year (2022) also water been stored in the ponds. As the pond no 3 is a balancing pond it will get full during all the rain days. The photos are attached.

Hence, it is submitted that IIM Trichy already implemented the “Catch the Rain” campaign.
